Hello all,

I am looking to generate 24 bit color postscript from IDL 5.3. Does anyone know if there is a way to do this? Perhaps I am being overly ambitious with asking for 24 bit... however, I have written all of my color plotting using 24 bit addresses for colors so if I cannot plot directly in 24 bit postscript, how do I go about converting my plots (which look very nice on my display) into a color postscript file.

Many thanks for the help.

Randall
