Dear IDLers,

This posting is off-topic, but as Bob Mallozzi was a frequent poster here, I thought I should mention something for those of you that knew of him. All others can certainly skip this.

It is with great regret and a heavy heart that I inform you that my friend and colleague Robert Mallozzi died last week in his home in Huntsville, Alabama. He was 35. Those of you that have seen his work, or read his comments here, know that he was a gifted programmer, one that truly loved his work. His postings here only hinted at his wonderful good nature. Unlike myself, he was right in there with the rest when a tricky question came up. He taught me object-oriented programming in the best way possible: producing good, solid examples in the WINGSPAN project code he produced for our group at the University of Alabama in Huntsville. I have had the pleasure of working directly with him for at least 5 years, and have nothing but respect for the many things he accomplished while he was here. You may know from his web page that he was a PhD scientist working in the field of gamma-ray astronomy, but you might not know that the journal article that formed the core of his thesis is still being cited heavily, five years after its publication. Recently, he had been working on a second degree, in CS, and had moved away from IDL programming, after he was hired away from our group. Still, he could always be counted to join in on our non-periodic beer tastings, bringing a few select brews along for us to sample. So when you get the chance, hoist one for Bob.

He will be missed.

- Rob Preece
Senior Research Associate
Dept. of Physics
University of Alabama in Huntsville
