## Subject: CHANGING THE SIZE OF MOVIE WINDOW Posted by Mark Chan on Mon, 11 Dec 2000 04:41:22 GMT

View Forum Message <> Reply to Message

A movie file was created using one of the many options available in IDL (E.G. WRITE\_GIF (available in older versions of IDL), WRITE\_BMP, ETC.)

The movie was made using TVRD, /MULTIPLE at a specific window size (e.g.WINDOW,0,400,300).

Is there an easy way to change the window size of the now created movie file so that it displays in a different sized window (e.g. 100 by 200) without having to re-run the movie creation routine?

Using WinNT4.

Thanks in advance, Mark Chan
