
Subject: CHANGING THE SIZE OF MOVIE WINDOW

A movie file was created using one of the many options available in IDL
(E.G. WRITE_GIF (available in older versions of IDL), WRITE_BMP, ETC.)

The movie was made using TVRD, /MULTIPLE at a specific window size
(e.g. WINDOW,0,400,300).

Is there an easy way to change the window size of the now created movie file
so that it displays in a different sized window (e.g. 100 by 200) without
having to re-run the movie creation routine?

Using WinNT4.

Thanks in advance,
Mark Chan
