Well, try this. I think it is doing exactly what you expect given that A is passed by reference, no matter how bizarre it looks.

```
.comp  
pro test1, x, y  
  x[2] = 10.  
  print, y  
end
```

```
a = findgen(10)  
print, a  
test1, a, a
```

X and Y are "pointers" to the same array A.

Cheers,
Pavel
