Well, try this. I think it is doing exactly what you expect given that A is passed by reference, no matter how bizarre it looks.

```
.comp
pro test1, x, y
  x[2] = 10.
  print, y
end
```

```
a = findgen(10)
print, a
test1, a, a
```

X and Y are "pointers" to the same array A.

Cheers,

Pavel
