H> Did so. Still not working. What can this be ?

I have no idea. Works for me. What do you get if you type

C-h k UP

where UP is the cursor key?

H> It looks like the IDL-shell does not now about my personal PATH variable.
H> This has nothing to do with idlwave itself, but I wondered if I could solve
H> it thrue idlwave. So I inserted this line in my .emacs file :
H> (setq idlwave-library-path "/home/henks/progs/idl").
H> I thought maybe idlwave could pass this to IDL running in the shell.

Well, it could, but you should do this in IDL. Create a startup file
"~/.idlrc" with

  !path = expand_path('+/home/henks/idl:') + ':' + !path

Then set the environment variable IDL_STARTUP to the name of that
file. I have in my .cshrc:

  setenv IDL_STARTUP ~/.idlrc

exact syntax of this depends upon the shell you are using.
Remove the (setq idlwave-library-path "/home/henks/progs/idl") - it
will keep IDLWAVE from doing the right thing.
