
Subject: PLOT question

I have some data that is periodic, $y=f(t)$ and the data is plotted as plot, t, y. The problem is I'd like t to plot phase angle rather than time, the problem being the phase angle is between 0 and 1 and repeats. Attempting to plot the data you just get a plot between 0 and 1, what I'd like to be able to plot is each cycle of the data with its phase angle.

Any ideas on how to get the plot axes right?

cheers,

S
