
Subject: 7.5 min DEM procedure?

Has anyone managed to write a routine to read in the USGS' 7.5 minute DEM files (description at http://edc.usgs.gov/glis/hyper/guide/usgs_dem)? I have done so for the NMA 3 arc-second DEM's, but the 7.5 minute series are more complicated due to the fact that they are defined on UTM rather than lat/long coordinates, and thus have a variable number of profiles per file and points per profile. Any pointers greatly appreciated -

Med Bennett
