Hi Anyone!

Need help for :

How can I specify the resolution 72dpi (default) to 300 dpi while storing an image with write_jpeg?

and (if you are veeery kind) :

what means "No application/appld is present for use with LIVE_EXPORT."?

This error message appears, if I start this (test)-code :

pro live

device,retain=2,decomposed=0

window,1, Title = 'test'

a=dist(512)

tv,a

live_export,Filename='test'

wdelete,1

end

(>>>maybe, its too stupid ;-)
