Hi David,

thanks again for your answer. Following your suggestions I will receive the plot with several lines in a layer with constant Z, if I understand it correct. I would like to make quite strange things: I would like to force the lines (where only [x,y] and no z's are available) following the topography of the corresponding surface plot. Is it possible to work somehow with the T3D matrix, something like: adopting the z-value in this matrix stored at the location [x,y], so that the lines are plotted on the surface of the surface-plot?

Thanks a lot for each hint and - good night (it's time now to leave the PC....)

Harald
