
Subject: Using two different arrays in the same calculation

I have the following problem :

I have two different arrays, (8) of float and (300,8) of float.

I want to vectorize the equation and therefore I need to use both arrays in the same equation. For example :

```
newarray=cos(small_array)*sin(large_array)
```

where I want the data in small_array to be used over and over 300 times in this calculation.

Hope somebody can help me.
