Subject: Probably a simple question, but I'm only a beginner with this IDL stuff :)
Posted by Chris Bull on Sat, 27 Jan 2001 14:57:40 GMT

I have read in an array from a file its an xyz image (three chanels pixel
interleved)
however it is defined from the top row of the image rather than the bottom
as IDL
defines it... If it were a two dimensional array it would be easy to
rotate/flip it
however I cant work out how to flip it and all my pictures are coming out
upside
down :(

Can someone please point me in the right direction on flipping it vertically
:)

TIA

Chris Bull
