Hi everyone,

I've managed to build the IDL RPC examples on a SunOS system. All I did was type copy the RPC directory and type "make". The supplied example program worked fine.

However, I'm having trouble making the system on a Linux box. I have searched the RSI website, and not found anything to do with 'RPC Linux', and only three (not helpful) files that match the keyword 'RPC'.

Anyone have any experience/suggestions/knowledge in this area?

-ken.
