Subject: problems with EMF file format
Posted by Luis Alonso on Thu, 15 Feb 2001 12:20:57 GMT

I'm generating several plots in EMF format.
After everything is done, i open the plots with a visualization program and everything looks fine.

The problems comes if i try to erase those files, i got the error: sharing error. The file is being used by other program.

The other program can only be IDL. So, what's going on? I do the device, /close and everything (otherwishe i wouldn't be able to open the file with the visualization program).

I use IDL 5.4 under Win2000. This also happened to me under NT.

Thanks
