Dear David: I was using IDL and none of my colors are working. I blame you. Why doesn't IDL work? I run something and the vectors are wrong but it didn't even work once. What did you do wrong? Also, I can't get to the 4th row of my vector. If Idl weren't so stupid I would be able to. Write a program to show me how to do the problem I have. It's #4 of the last homework in my class. It's really long. I looked on your web page but you didn't tell me how. It's due today and IDL isn't very fast or I would be done already.
