
Subject: Modules directory howto find or link IDL 2 it

I've written several modules, ones that work,
and have proven themselves through time,
how do I link them (from a subdir) in IDL???

We have IDL running on Unix, multi user, all with our own homes.
I want my version of IDL or in my environment to look for a PRO file
in its current directory, then MYmodule directory and then the IDL main
module directory.

How can I accomplish this?

Must I set a environment variable??

Thanks in advance

Sean
