---

How do I force IDL to plot a, say a circle in window with a Quadrant set out?

If the data is only in Quad I it doesn't matter, I still want the axis to be

-MAX -> +MAX in both X and Y

If I set !X.CRANGE I set it, but when I plot I somehow seem to have lost the settings I just made

Another problem is plots, that has to plot A line through 0,0 (x,y) from -MAX, +MAX for X and -MAX, +MAX for Y

Any ideas ???

Greets Sean
