Hi...

I have some data from a file...

example:

file start

10.5 30.5 40.8 57.9 90.8

end of file

I would like to read these data from a file, and these should be placed in a array...

But when I read the file the datas are placed in a string. How do i get these data converted to a array?

Thanx

Martin Skou
