From the default install of MacOS 9.1, I find I also have USB Device Extension
version 1.4.6 dated 2000 Oct 17, so I don't know why yours wasn't working (may
be some update to EnetShimLib). But I'm glad it is working now. [To get 1.5f3,
go to <http://developer.apple.com/hardware/usb/download.htm>]

Bobby
