
Subject: Cant find functions in lib

Helle there,

I am using IDL for imaging in Nuklear Medicine. We wrote a big library (NukMed.pro) with some functions and dont want to compile it each time. So we thought to put it in the lib directory of IDL, where IDL itself puts all its *.pro.

But when we try to use it, IDL doesnt find the functions we used the whole time. Do I have to precompile it or to sign up in a special list for all *.pro files?

Thanks

Dominik
