
Subject: Breakpoints w/in XManager

I found that I couldn't set up breakpoints or stop while inside an XManager event, so I wrote a little include file that lets me view variables:

code fragment:

```
...  
@pause.pro      ; break here  
...
```

pause.pro:

```
while (1) do begin  
    Command = ""  
    read, Command  
    if (Command EQ 'q') then goto, QUIT  
    Result = Execute(Command)  
end  
QUIT:
```

Alan
