Subject: something like perl's 'require 5.4'
Posted by Vapuser on Mon, 16 Apr 2001 22:16:51 GMT

Hi all.

  I'm looking for something that check the version of the current IDL
  session against an input version, like perl's 'require 5.4'
  semantics and I *thought* I saw someone mention using something very
  much like this.

  Does anyone know of such a thing or was I just hallucinating?
