```

because data is passed by reference and
data.values is passed to READF by value

```
> READF, 1, array  
> data.values = array      ; <-- dirty cheat
```

not a dirty cheat but one possible way to get your data into structure.
another way is to define values in your structure as a pointer

```
data = {basic_struct, comment: ' ', values: ptr_new(fltarr(nlev))}
```

and then

```
READF, 1, *data.values
```
