I noticed some people were talking about ther TIMER feature,; however, my manual does not say anything about the timer: do I have a wrong version?

I get the following error:

```
IDL> widget_control, a,/REAL,TIMER=1
```

```
% Keyword TIMER not allowed in call to: WIDGET_CONTROL
```

```
% Execution halted at $MAIN$ (WIDGET_CONTROL).
```

```
IDL>
```

STRANGE. or is it?

<VERSION: IDL. Version 3.0.0 (RISC/os mipseb).
