Ok, so it seems like IDL can perform only one event at a time.

I am using SPAWN command now, BUT why the hell would they then say :

" - Multiple widget applications can run in parallel, each with equal priority among the others"...

il guess it is not as easy as it sounds. I guess I should always try to find a fine print here...<but WEHRE?>

Anyway, thanks for all your advices, at least now I have some way of doing it

A
