Is there a bug in IDL's Save/Restore command? I've just spent the last 18 days running a Monte Carlo simulation to seemingly lose all my data. The problem occurred when our license manager stopped responding (network problem) hence the IDL session running the simulation crashed. The MC code is designed to save results periodically as it runs (just in case this sort of thing happens). I've just tried:

```
"restore, 'mc_file.sav', /Verbose"
```

only to get:

```
% RESTORE: IDL version 5.3 (linux, x86).
```

```
% RESTORE: Truncated save file, restored as much as possible:
```

That "restored as much as possible:" is in fact 0 (zero). Despite the file itself being 17 Mb! Some of my .sav files are a lot bigger than this, yet don't seem to have any problems. Is there anyway to recover this file, or prevent this happening again in the future? I'm going to very upset to lose 18 days work...

cheers,  
S
