Hi,

I hope someone on this group know this problem and is able to help.

On one of my linux system I got always a monochrome color output
(grey scale) by idl. All other applications do have colors.

I have three identical machines (I believe) and only one of
them has this failure.

```
loadct,5
a=bindgen(256)
b=[1,1,1,1,1,1,1,1,1,1,1,1B]
tv,a#b
```

device,decompose=0 or 1 gives no difference.

Are there any grafic adapter problems known which will give this results
for IDL?

If I install vmware and windows and idl I have colors in idl too.

Any ideas are welcome

regards
Reimar
