Subject: Basic insight into Insight basics?

I am new to IDL. I am using version 5.1. I was psyched to discover the
INSIGHT feature. It allows me to make nifty plots in no time. However,
I cannot seem to figure out how to get my nifty Insight plots into
presentable (high-resolution, color) postscript files. I've tinkered
with the print menu button and options thereunder, and tried converting
gif/jpeg output to postscript, with no real success. Many thanks in
advance for any advice on how to go about this.

Cheers,
Rick
