
Subject: warping continents to magnetic coordinates

Hi everyone,

I am interested in displaying the continents on a non geographic coordinate grid.

Specifically, I have the corrected geomagnetic CGM grid off the NSSDC website, and wish to display the continents with some data on this grid. Those of you with the latest "Reviews of Geophysics" (Volume 39, Number 2, May 2001) can see on the cover what I'm trying to do.

I have found the maps in the IDL map directory. I have read (briefly) the map_continents procedure. I discovered the !map system variable. I am just not sure what my next step should be...

Thanks for any help,

-k.
