But then there's the following fun:

```
IDL> key= 1 & print,['first','second','third','fourth']  
second
```

```
second
```

```
IDL> key= 3 & print,['first','second','third','fourth']  
fourth
```

```
fourth
```

```
IDL> key= 5 & print,['first','second','third','fourth']  
fourth
```

```
fourth
```

```
IDL> key= -999 & print,['first','second','third','fourth']  
first
```

```
first
```

Which is a "feature" when you expect it, and a bug when you don't :)

Brian
