Subject: trouble compiling AIM routines (mac files on windows?) Posted by mvukovic on Mon, 04 Jun 2001 23:49:41 GMT

Hi,

I downloaded AIM (an image processing tool). However, although the directory is in !path, the .compile or .run statement does not do any compiling (no messages regarding compiled routines).

The files seem to be in Macintosh format. Could that have something to do with it? I did download the windows version.

Thanks,

Mirko
