This is the basis year for determining the parent's contribution for my oldest son's college expenses, so expensive is more attractive than it usually is. (I hope my son isn't reading this.) I've been thinking about a fast car, but can't figure out how to write it off as a business expense. A fast graphics card is easy. :-)

That GF2/Quadro professional OpenGL card goes for about \$670. It's not chump change, but I think I could be happy with something like that for a month or so.

Cheers,

David
