Subject: Searching for Translucency Algorithm

I'm trying to implement a 3D image processing tool within IDL and
need a really good algorithm for displaying translucent objects.
I've looked through the supplied IDL functions and some on the net
but haven't found anything that would be useful. Any help would be
appreciated. I certainly would like to see any code in idl-pvwave,
but I can do just about any translation.

Thanks!

- Chris
