Subject: Piecewise linear fitting

Greetings,

I would like to get my hands on an IDL routine that does a piecewise linear fit to data. The number of pieces is known but the locations of the break points are not. I don't have the time nor the expertise necessary to write it myself. Could anyone please direct me to such a program? I've done several lengthy searches but to no avail. I would greatly appreciate any help you could give.

Thanks,

Mike
