```

I don't know how WV_APPLET should be called.
I've never heard of it. Is this an IDL program in
your path?

But I thought the original problem was that
READ_ASCII didn't like the filename. I can well
believe this, since in the example:

```
> profile_data = read_ascii(test, $
> template=ascii_template(test,BROWSE_LINES=4241), $
> DATA_START=13)
```

the variable "test" is nowhere defined in this
procedure. This should be the name of a data file,
for example:

```
test = 'mydata.dat'
```

I'd be saving up for a good book on widget
programming, too. I'm not sure the example
you are following is going to get you too far. :-)

Cheers,

David
