
Subject: WIDGET_TEXT /APPEND

I encountered the following problem working with WIDGET_TEXT:

If I have a widget_text scrollable for example with YSIZE=3, then when I try to add more information to it AFTER all three lines have been filled, the new line goes to UNDERNEATH the window <not visible> and only comes up after I write something to the window again.

in other words here how it goes:

FOR I=0,3 do begin

widget_control, text_win, set_value=string(i), /APPEND

END

you will have:

0

1

2

printed on the window, and 3 will be beneath it...<not visible> is there a way to overcome that?
thanks
