Subject: help with findfile

I am using the FINDFILE routine to list all of the available data files in a
particular directory. I then search through the list to get starting and
ending points for a particular image. However, the filenames returned by
FINDFILE are not in order (alphabetical), they are all mixed up. Any way to
get them in order? I am using IDL 5.4 on Win 2000.

Ideas?
Thanks,
Dave
