if I have a list of associated arrays in PV-WAVE, how do I get the elements of the arrays through the list (ie. searching through the list of arrays to see if a value exists)

```
lst = LIST ( )
```

```
data = ASARR ("filename".... etc)
```

```
for ( i=0, N_ELEMENTS(lst)-1 ) DO BEGIN
```

```
; look at the data filename in that list position
```

```
check = lst(i).data("filename")
```

Any help much appreciated
