I have an application in which I want to be able turn motion events (generated by mouse cursor dragging in a draw window) on and off. According to the Reference Guide (pages 1-326 and 1-327) the syntax for this should be

WIDGET_CONTROL, widget_id, /DRAW_MOTION_EVENTS

to turn such events on and

WIDGET_CONTROL, widget_id, DRAW_MOTION_EVENTS=0

to turn them off.

Unfortunately, when I use this command, I get the following error:

```
% Keyword DRAW_MOTION_EVE not allowed in call to: WIDGET_CONTROL
% Execution halted at $MAIN$ (WIDGET_CONTROL).
```

Has anybody done this? Am I missing something obvious, or is this just a bug?

(I am using IDL 3.5.1 on an HP9000 model 715/75 with 64 MB of RAM running HP-UX 9.0.3)
