Hi all,

i have a directory with different numbers of files. I read the filenames by

```
text = FINDFILE('H:/radiologie/*.dcm')
```

in my testdirectory there are 14 files so it's defined when to stop

```
FOR i=0,14 DO file[*,* ,i] = READ_DICOM(text[i])
```

QUESTION:

How can i get the size of the array TEXT to stop by FOR i=0,stop DO ...

Is there something like EOA (EndOfArray) like EOF ?

Thanks,

Oliver Emmler
