Subject: Re: Any fix for IDL + MacX?
Posted by davidson on Thu, 11 Aug 1994 17:48:52 GMT

Another solution I have found to the problem of MacX vs. IDL is to ditch
MacX in favor of eXodus (by White Pine Software). Since I tried eXodus in
January, I haven't run MacX ... even once. It isn't perfect (I've informed
White Pine tech. support of a few bugs), but I have found it to co-exist
well with IDL [Important: Be sure to select "Macintosh (Intl)" as the
keyboard mapping in eXodus, or IDL dies a horrible death].

Good luck,
Steve Davidson
