
Subject: Where is the largest point ?

I'm still pretty basic at IDL and a lot of the `_no loop_` concepts escape me entirely (I'm too used to C and such).

If I have a 2D matrix, how do I find where is the maximum ?

Say:

```
Mat=FltArr(NbX, NbY)
```

```
...
```

```
[Xmax, YMax] = Where( Mat eq Max(Mat) )
```

or something like that ?
