Subject: HELP!!! ^Z

Posted by rouse on Mon, 08 Aug 1994 19:42:36 GMT

Hi all,

I was running a widget application which I tried to control-c out of,
but immediately after the control-c I hit control-z. Now, the IDL session
is frozen. There is data in memory that I would like to write to a file.
Is there some way that I can recover/continue the session with out losing the
data?

Info: IDL 3.0.0 on DECstation 5000 with Ultrix4.2A

Please email me directly as soon as possible (before it decides to time out or
something) at rouse@sevens.la.asu.edu.

Thanks, Roger
