How about

```
my_time = (findgen(24.*60.*60./1.04906)*1.04906)
hh = fix(my_time / 3600L)
mm = fix((my_time - hh*3600L)/60L)
ss = my_time-hh*3600L-mm*60L
out = transpose([[hh],[mm],[ss]])
print, out[* , 82300:82310], format='(i2,":", i2,":", F8.5)'
```

If you need exact zero-padded field width, play with string conversion and formatted output.

Cheers,

Pavel
