---

I have read the 1,2,4bytes binary data from cdrom sucessfully using PVWAVE version 4.0 and Dec risc Ultrix(ULTRIX 4.3).

The read format was

```
openr,21,'filename'
```

```
par1=intarr(1)  
par2=lonarr(1)  
par3=intarr(1)
```

```
readu,21,par1  
readu,21,par2  
readu,21,par3
```

```
..
```

Recently we upgraded pwwave(version 4.2) and system(Dec OSF/1 AXP OS:OSF/1 V2.0). I used the same program to read the same data.

I found the lonarr read 5byte rather than 4byte. The intarr read 2 byte correctly.

Can anyone tell me what's problem for the lonarr?
