Subject: better doc_library?

Hi,
 I've just been charged with the task of finding a suitable replacement
for doc_library that will overcome the following shortcomings:
-we have several 'x_util.pro' files that contain multiple routines, and
doc_library, 'routine_foo' doesn't work in this setup
-doc_library reads its information out of the .pro file on disk, which may
be different from the routine loaded into memory

Does anyone have a better method of self-documentation, preferably not
using comment blocks (i.e. print statements)? Something like a 'here
document' in shell scripting, perhaps?

Thanks,

Tim Lloyd, lloyd@lasp.colorado.edu
