Subject: Where is the right place to define new structs?

Hello again,

just another question:

I want to implement a function for thermodynamic
calculations I need. This function needs a parameter
set as input and returns a parameter set as output, so
I have to define the structs which hold these sets
somewhere.

I think that the right place is in the same .pro-file
which holds the function but I am not sure if IDL is reading
this definition automatically when I use the function in a
different program. Here is an example:

foo.pro:

define structs...

function code...

bar.pro:

use one of the structs, then
call the fuction foo and pass
the struct to the function.

Thanks for your help,

Olaf

ps: Maybe it is the right time of buying a book on
    IDL-coding now... :-)
