: I don't use Word 6 for Windows but I think that what is happening to
: you is correct, that is your graphics was included correctly by Word
: and the entire document should print fine.

: Many programs claiming that they are capable of importing Encapsulated
: Postscript Files do not *show* them within their documents but *represent*
: them with a box showing information taken from the file (i.e. title,
: creator, and so on...), this is the case, for example, for the DVI
: previewer for Windows (I don't remember the name of the program), and,
: under Unix, for the tgif program.

: cheers

That's right. It will print fine but only if you print it to a postscript
printer. If you want to use another printer I would recommend getting
ghostscript/ghostview and using those to print out. In fact that is how
I print IDL graphics on my ink jet. I write out to a PS file and use gsview
to interpret it.
