
Subject: Converting Microsoft Date/Time into JS?

Hello,

after my first steps in IDL I startet do write
some Date/Time-conversion functions which are
needed to convert Julian Seconds (JS) to/from
the struct ODBC_SQL_Timestamp which is the format
returned by Database Queries (Dataminer).

Now I am confronted with the task of reading some
.csv-files and write the data into the database.
Not too complicated but the date/time stored in
these .csv-files is in the Micro\$oft-format which is
called (IMHO) Gregorian Days or Seconds. I couldn't find
some functions yet which handle these formats. Do they
exist or is there an easy way to convert these into JS?

Thanks,

Olaf
